Count sheets in a workbook excel

In fact, MS Excel doesn't have any Straight Formulas to Count Worksheet Numbers in a Workbook. But, we have indirect ways to count the same. How? First, we need to Define Name by referring to =GET. WORKBOOK(1)&; T(NOW()) Then, Use the formula below to Count Worksheet Number =COUNTA(INDEX(DEFINED NAME,0)) Step by step? 2003 and Below version excel 1. Press Ctrl+F3', and then the 'Define Name' box appears 2. Type 'Name in workbook' as CountSheets (Your Choice) 3. Type 'Reference to' as =GET. WORKBOOK(1)&; T(NOW()) 4. Click OK 5. Go to Cells, where you want to enter Formula 6. Type Formula as =COUNTA(INDEX(CountSheets,0)) 7. Click Enter 2007 or higher in Excel 1. Click 'Ctrl+F3', and then the 'Name Manager' box Appears 2. Click 'New' (using the Alt+N shortcut) 3. Then the 'New Name' box appears 4. Type 'Name' as CountSheets(Your Choice) 5. Type 'Reference' as =GET. WORKBOOK(1)&; T(NOW()) 6. Click OK 7. It will take you to the 'Manage names' box again (you can find the name identified in the list) 8. Click 'Close' 9. Go to Cells, where you want to enter Formula 10. Type Formula as =COUNTA(INDEX(CountSheets,0)) 11. Click Enter If you google about this, you can find alternatives with VBA code. Without using VBA, I think this is an easy way to count the number of sheets. Don't forget to give a comment below, if you find any work alternatives, or if you have any questions. Also read Politely: lostinexcel.blogspot.in www.Excelolozy.com - If you don't use the VBA editor, you can use this trick to count worksheets in an Excel file. In case you delete several worksheets, the VBA window will not provide the actual number of worksheets. So the trick is as follows: > Select the first table > type in an empty cell = CountA(> before pressing enter hold of shift and click the last sheet > note: formula reference will change. > now press enter. Formula for counting sheets in Excelolozy by Vikrmn CA Vikram Verma author 10 Alone Chartered Accounting spreadsheet files Anything in Excel, is an Excelolozi... for best MS Excel Access tips gotta query??? drop a message at mail@excelolozy.com Posted by Vikrmn: Author of 10 Alone (CA Vikram Verma) 10alone.com In Excel, if you have multiple sheets, you can use a VBA code to count them quickly instead of manual counting or using any formula. So in the article, we'll see different ways to count sheets from a spreadsheet. Counting Worksheets from Active Workbook Tracking is the code that you need to use to count worksheets from an active workbook. ThisWorkbook.Sheets.Count In this code, you first get called active spreadsheets using ThisWorkbook and refer to all the sheets, finally, using the counting method to count all the sheets. And if you want to count spreadsheets instead then use the following code. ThisWorkbook.Worksheets.Count Useful Links: Run a Macro - Macro Recorder - Visual Basic Editor - Personal Macro Workbook Count Sheets from a different spreadsheet, you can use these of the spreadsheet for reference and then count the worksheets from it. Let's say you want to count worksheets from a Book1 spreadsheet. Here's the code. Workbook (sample file.xlsx). Sheets.Count This code gives you the number of sheets that you have in the sample-file spreadsheet.xlsx. There is one thing that you need to think that this spreadsheet needs to be open. Count Worksheets from All Open Workbooks You can have multiple workbooks open at the same time, and you can count all worksheets from all of them. Sub vba_loop_all_sheets() Dim wb As Workbook Dim i As Long For Each wb In Application.Workbooks If wb. Name <=> PERSONAL. XLSB Then i = i + wb. Sheets.Count End If Next wb MsgBox Total sheets in all the open workbooks: & i End Sub Count Sheets from a Closed Workbook Now here we have a code that refers to the workbook that is saved on my system's desktop. When I run this code it opens that spreadsheet at the backs and counts the sheets from it and adds that number to cell A1. Sub vba_count_sheets() Dim wb As Workbook Application.DisplayAlerts = False Set wb = Workbooks.Open(C:\Users\DELL\Desktop\sample-file.xlsx) ThisWorkbook.Sheets(1). Range(A1). Value _ = wb. Sheets.Count wb. Close SaveChanges:=True Application.DisplayAlerts = True End Sub We turned off display alerts to open and close files in alices. Back to VBA Spreadsheet/VBA Guide Have you ever considered how to count the number of spreadsheets in a spreadsheet? To count them one by one is a boring job, if there are a lot of spreadsheets. In fact, there is no straight formula for calculating the number of spreadsheets. But, here, I can introduce you to some useful and handy tips for dealing with this problem. Count worksheet numbers in a workbook with the Define Worksheet Count name command a workbook with VBAX code exhibiting worksheet numbers the workbook by using the Guide: Counting worksheets in a workbook by creating a list of worksheet count worksheets in a workbook with the Define Excel Name command, you can first apply the formula to The Define Name feature, and then count the number of worksheets.1. Launch the workbook for which you want to count the number of worksheets.2. Click Formulas > Define Name, see screenshot:3. And in the New Name dialog box, specify a name in the Name text box, and then type this formula =GET. WORKBOOK(1)&; T(NOW()) to the Reference to text box, see screenshot:4. Then click OK to close this dialog box and return to the worksheet, and then type this formula =COUNTA(INDEX(CountSheets,0))(CountSheets in this formula is the name you specified in step 3, you can change it as needed.) in an empty cell, see screenshot:5. And pressing the Enter key, you'll get the number of your spreadsheets in the current spreadsheet. Count worksheet numbers in workbooks with VBA code! If you think the above formulas are somewhat difficult to remember, this is a simple VBA code that can also help you.1. Hold down the ALT + F11 keys and it opens Basic Window for Apps.2. Click Insert Module > and paste the following code into the Window.VBA Module code: Count the number of worksheets in the Workbook Public Sids Count() 'Update 20140326 MsgBox Total worksheets of this workbook: & Application.Sheets.Count End Sub 3. Then press the F5 key to enforce this code, and a prompt box pops out to let you know the total number of worksheets as shown after the screenshot is displayed: Display the number of worksheets in the workbook with the Navigation pane! If you have installed Kutools for Excel, you can clearly view the number of worksheets in the workbook with the Navigation pane. After installing Kutools for Excel for free, please do the following:1. Click Kutools > navigation to turn on the Navigation pane to the left of the worksheet. See screenshot:2. Then click the Workbook > Sheet tab, and then you can see the total number of worksheets in the active workbook displayed at the bottom of the pane, you can also see the number of visible and hidden worksheets of the workbook. View screenshots:With the Navigation pane, you can switch between worksheets, display all column headers, range names, and add text automatically, and so on. Click here for more details. Navigation Pane - List and Count All Worksheets Count the number of worksheets in the workbook by creating a list of worksheets! If you think of the above methods are not convenient, I can introduce you roundly. If you have Kutools for Excel installed, you can create a list of the names of all worksheets, and then select them to count in the Status bar. After installing Kutools for Excel for free, please do the following:1. Turn on the workbook for which you want to count its worksheets, and click Kutools Plus Worksheet > and > List of Worksheet Names. See screenshot:2. Then, in the popping dialog box, select Contain a list of hyperlinks, and to choose a worksheet name convincingly, you can display the worksheet index in 3 or 4 columns. See screenshot:3. Click Ok, and then a worksheet is created with the names of all worksheets before all worksheets, and you can simply select these worksheet names and see the count results in the Status bar. In fact, these worksheet names are linked, you can click on a worksheet name and then quickly link to the relative worksheet. And with Create a List of Worksheet Names, you can create linkable buttons of worksheet names by selecting Options Contain buttons and macros. Click here for more on Creating a List of Worksheet Names. Create a list of Application.Sheets.Count name tables - Count tables If you ever need to count the number of sheets in a spreadsheet, use the VBA command: Application.Sheets.Count Put this in a module: Public Sub CountMySheets() MsgBox Application.Sheets.Count End Sub Stop searching for VBA code online. Learn more about AutoMacro - VBA Code Err00 lets beginners code the process from scratch with minimal coding knowledge and with plenty of time-saving features for all users! Learn more! about VBA For example easily access all the example code found on our website. Just navigate to the menu, click and will be inserted directly into your module..xlam add-in.
